HIGH BACK SEATING

Consider the boss' chair, a mute object. You may think, an insignificant agglomeration of steel springs and upholstery - only a spot to sit. Indeed, the seat picked by top officials is significantly more than that. It is a totem, an image of intensity, and it anticipates a charming, if subliminal, message. The C.E.O.'s chair is a very powerful tool for managing the impressions of visitors. It exemplifies personal style. Does it say hierarchy, or does it create the illusion of equality? Either way, the chair's symbolism is key. Our executive chairs are designed to exhibit seating that offer unparalleled levels of comfort and support. Most of these products of engineered working comfort are made in a range of models for all of the employees in the corporate empire - from the data processors to the C.E.O so that one doesn't have to divine from the height of the back or the richness of the upholstery who the ultimate occupant might be
